

Hydraulic Oil Service by Jungheinrich.

Fast, safe and dependable.

 **JUNGHEINRICH**

„We have been very pleased with the Jungheinrich Hydraulic Oil Service for years. It is easy to schedule as well as cost-transparent and also enhances warehouse safety.“

(Klaus-Peter Welsch,
Member of the Board Geiss AG, Sesslach)

„I can highly recommend this service.“

On the safe side with our hydraulic oil service.

It doesn't get any easier than that: You focus on your business and we take care of your vehicles' oil service.

Our qualified oil service experts handle the timely and professional exchange of hydraulic oils as well as their environmentally sound disposal. With the first-hand expertise of the manufacturer we recommend a yearly oil change or after approx. 2,000 operating hours, thereby ensuring the long-term dependability and longevity of your vehicles.

Especially during operations with forklift trucks, hydraulic oils are permanently exposed to high pressure and extreme temperatures. Dust and

moisture also play their part as well as mechanical risks due to wear of valves, rust damages or sticky hydraulic parts.

To ensure an even and clean oil film throughout the entire hydraulic system – even under these conditions – and thus to prevent downtimes of your trucks, the periodic and professional exchange of hydraulic oils through our specially trained service engineers is an important measure.

Our service includes:

- Waste oil extraction and ecologically responsible disposal
- Cleaning of the tank and system rinse
- System refill with certified Jungheinrich quality oils
- Replacement of filter (approx. once a year)
- Machine care
- Instant service for worn hydraulic hoses

Professional and easy to schedule.

At your request, our highly competent service engineers not only change the hydraulic oils of your Jungheinrich trucks but also those used in other hydraulic appliances.

Your advantages at a glance:

- Preserving operational safety
- Protecting the environment from oil waste thanks to professional and sustained handling
- Cost transparency and dependability of the service
- Minimizing downtimes
- Peace of mind due to compliance with all legal regulations

Sustainable on principle.

Hydraulic oil changes at a regular basis executed by our service engineers helps you avoid annoying and costly troubles. In addition, this significantly contributes to accomplishing sustainability and protecting the environment.

Our service adheres to all current directives and exclusively uses Jungheinrich quality oils that have been certified and are environmentally friendly in accordance with the relevant regulations. This adherence to legal and ecological regulations also applies to the disposal of waste oils and defines our actions.

In order to meet the requirements of the environment protection legislation, Jungheinrich relies on qualified hydraulic oil service engineers as well as special hydraulic oil service cars.
